

Need a Skype for Business Replacement?

Learn why Mattermost is the best solution to upgrade your collaboration strategy

Moving to a new collaboration platform is time-consuming and complex, and deferring the decision can create security risks and workflow inefficiencies. As organizations prepare for the end of Skype for Business' extended support in October 2025, ensuring a seamless transition to a new system is essential.

Mattermost is a secure collaboration hub that helps organizations increase the speed and efficiency of mission-critical work in complex environments.

The Mattermost Difference

Security from End to End

Meet complex security and compliance needs with a transparent, highly configurable platform that deploys to public and private clouds, as well as air-gapped networks. Enable custom single-sign-on, data retention, eDiscovery integration, plus message monitoring and filtering capabilities.

A Fast, Familiar Interface

Mattermost provides a user-friendly experience while offering robust technical collaboration features designed for complex workflows, compared to general collaboration solutions such as Microsoft Teams and Slack.

Open Source Adaptability

Mattermost's modern architecture supports extensive customization, APIs, and open-source code, offering a more flexible solution that conforms to your team's unique workflow needs.

Resilient Deployment Options

From self-hosted to private cloud and single-tenant SaaS, Mattermost offers you complete control over how you deploy, ensuring greater control over downtime and upgrades for a more resilient collaboration environment for your team.

Extend your Microsoft environment with a secure digital hub for technical teams.

Mattermost is built to integrate, extend, and complement your unique environment. With powerful functionality and key DevSecOps integrations, you have the flexibility to extend the platform. Mattermost helps your team focus on critical operational work while using the tools they chose to get the job done.

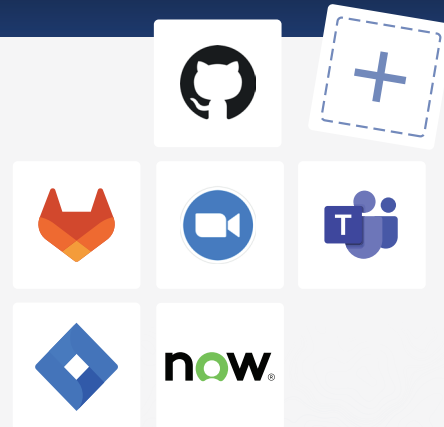

For many organizations, Microsoft 365 is a core general collaboration application that technical & operational teams struggle to adopt. Mattermost for Microsoft Teams provides an extended experience for collaboration while staying firmly integrated into the Microsoft 365 all-employee platform.

- Pre-built Outlook calendar integration
- OneDrive integration for Office 365
- User Management with Azure Active Directory
- SSO with ADFS and Office 365

Connect your entire toolchain

Context switching can slow down even the fastest-moving development teams. Bring every SaaS and custom application your team relies on together with Mattermost, and build custom actions and bots to get more from your workspace.

- Plugin Framework
- REST API
- Custom Bots
- Interactive Messages
- Slash Commands
- Webhooks
- Plugins
- Modify Source Code
- Zapier Support
- Pre-built plugins

Mattermost brings your teams, tools, and workflows into a single collaboration hub.
Accelerate mission-critical work and keep your team focused without compromising on security.

Channels

All of your team's communication in one place

Specifically for technical collaboration, Channels can be customized to fit the way your team works together, no matter what their workflows look like.

Playbooks

Orchestrate workflows

Quickstart your workflows with configurable Playbook templates to codify best practices or build playbooks from scratch to match your critical, and dynamic processes.

Calls

Elevate text discussions to voice conversations

Harness the power of native audio calling and screenshare from within your team's Channels to swiftly triage issues, respond to incidents, and work through routine and ad hoc processes.

Security and compliance to keep you in control

Mattermost is easily customized to meet your specific compliance requirements with fine-grained data retention, audit logs, and the ability to programmatically archive and export records. We provide full access controls and give teams the ability to set granular permissions to control access to sensitive data.

- Self-hosted deployment and database ownership
- Built-in identity & access controls
- Advanced mobile security
- Compliance auditing with oversight
- Secure cloud and data isolation
- Enterprise Information Archiving integration
- Data encryption at rest and in transit
- Full access to APIs, drivers, and open source code

“If you value your data and privacy and aim for high reliability and general ease of use, then self-hosted Mattermost is by far the best option out there.”
